Pre−specified eligibility and quality control in every cohort (rule−applied exclusion lists approved before modelling)
GSE63060
Discovery
AddNeuroMed batch 1, Illumina HT−12 v3
329 arrays deposited
145 AD, 60 CTL
44 sex−discordant controls removed
GSE63061
Related cohort
AddNeuroMed batch 2, possible overlap
388 arrays deposited
139 AD, 133 CTL
consistency, not replication
GSE140829
Replication
HT−12 v4 (nuID), independence unverified
587 arrays deposited
201 AD, 248 CTL
4 unpartnered replicates set aside
GSE99039
Specificity
Parkinson's disease, Affymetrix U133+2
558 arrays deposited
IPD 197 / GPD 40 / GU 22 / CTL 229
two−sided, Holm across 3 contrasts
Differential expression
limma, age, sex, chip
1,401 genes at FDR < 0.05
14 sensitivity analyses
Signature locked: 200 genes
Consistency test
composite score, per gene
Replication test
composite score, per gene
Specificity test
two−sided score test
the same locked signature, unchanged
Classifier
ridge, genes chosen inside folds
nested, chip−grouped CV
200−permutation null
Model frozen
Applied once
to GSE63061
Applied once
to GSE140829
no re−fitting, no tuning
Leukocyte−composition sensitivity: five MCP−counter marker indices added as covariates
discovery cohort (S11; method chosen after primary results), replication and specificity cohorts (S11−ext; post hoc)
